

Abstract: A replacement brake bleeder valve for leaky original equipment manufacturer brake bleeder valves. It includes: A replacement valve body that matches the original equipment manufacturer brake cylinder threads and seals to the brake cylinder to prevent brake fluid or air leakage. A replacement bleeder valve that opens or closes brake fluid or air access to the original manufacturer brake cylinder, and an O-ring seal secured between the replacement valve body and the replacement bleeder valve to prevent the leakage of brake fluid or air while bleeding the brakes.
